edmund burke s 1791 reflections on the revolution in france is a strong example of how the thinking skills of analysis and reasoning can support even the most rhetorical of arguments often cited as the foundational work of modern conservative political thought burke s reflections is a sustained argument against the french revolution though burke is in many ways not interested in rational close analysis of the arguments in favour of the revolution he points out a crucial flaw in revolutionary

thought upon which he builds his argument for burke that flaw was the sheer threat that revolution poses to life property and society sceptical about the utopian urge to utterly reconstruct society in line with rational principles burke argued strongly for conservative progress a continual slow refinement of government and political theory which could move forward without completely overturning the old structures of state and society old state institutions he reasoned might not be perfect but they work well enough to keep things ticking along any change made to improve them therefore should be slow not revolutionary while burke s arguments are deliberately not reasoned in the rational style of those who supported the revolution they show persuasive reasoning at its very best

what if our civilization were to collapse not many centuries into the future but in our own lifetimes most people recognize that we face huge challenges today from climate change and its potentially catastrophic consequences to a plethora of socio-political problems but we find it hard to face up to the very real possibility that these crises could produce a collapse of our entire civilization yet we now have a great deal of evidence to suggest that we are up against growing systemic instabilities that pose a serious threat to the capacity of human populations to maintain themselves in a sustainable environment in this important book Pablo Servigne and Raphaël Stevens confront these issues head on they examine the scientific evidence and show how its findings often presented in a detached and abstract way are connected to people's ordinary experiences joining the dots as it were between the Anthropocene and our everyday lives in so doing they provide a valuable guide that will help everyone make sense of the new and potentially catastrophic situation in which we now find ourselves today utopia has changed sides it is the utopians who believe that everything can continue as before while realists put their energy into making a transition and building local resilience collapse is the horizon of our generation but collapse is not the end it's the beginning of our future we will reinvent new ways of living in the world and being attentive to ourselves to other human
